

RMS Banner™ G4 (Honeycomb)

“Stretch Your Imagination”™

ROUSE
Matrix Systems
INSTRUCTIONS

G4 configuration of the RMS Banner is:

- * Thinner – It is 10 mil instead of 15 or 20 mil in classic versions;
- * Lighter – The thinner material weighs less in shipping and handling;
- * Smaller – The smaller volume offers less bulk.
- * Softer – The new Banner is gentler on hands;
- * More Flexible – The material is gentler on balloons.
- * Stronger (Apertures) – Rounded ends on cuts reduce tearing.
- * Stronger (Connections) – Panels connect & hold together more securely.
- * Stronger (Hold) – Non-toxic, wax adhesive stripes hold balloons in place.
- * Cleaner – There are no triangular chips to pull out & clean up.
- * Oriented – The upper left hand corner is marked to facilitate orientation.
- * Identified – Identification labels are cut into each panel.
- * Recyclable – The HDPE plastic may be recycled.

And, it still connects seamlessly with the classic form of RMS Banner .

Learn more about RMS Banners online at: <http://rousematrix.info/banner>

Wrap the G4 Banner tab around the classic Banner tab so as to interlock the notches/slits just as you would ordinarily interlock two of the same RMS Banner tabs.
